HAZDUST WET DUST COLLECTORS:
Models 1800, 3000, 4000 and 5000

FEATURES

- Direct drive non–sparking aluminum backward curved blower
- Washable polypropylene mist eliminator
- Automatic water level control with low level shutoff
- High level shut-down control
- Factory pre-wired control panel

* Features and specifications may change without notice

The HAZDUST Wet Dust Collectors are designed to provide efficient, 99% at 5 microns, cost effective control of all flammable metal dust contaminants generated from a variety of manufacturing and process applications. Typically used for control of moderate to heavy concentrations of contaminants, the HAZDUST series tables can be used for grinding, polishing, and dry buffing. The auto water fill with low level shutoff system can minimize the maintenance. Washable high efficiency mist eliminator provides reduced filter replacement costs.

The HAZDUST will help with compliance to local OSHA and NFPA regulations by drawing contaminants away from the operator’s breathing zone and reducing the flammability concerns with metals such as aluminum and titanium.

The HAZDUST unit comes standard with “Dust blocker technology,” stainless steel construction on wetted surfaces, direct drive blower and TEFC motor, polypropylene mist eliminator, auto water level control with low level shut off, and a factory pre-wired control panel.
CALL US TODAY 877-844-3293

OPTIONS:

- Closed loop recycling system
- Galvanized construction
- Smaller and larger airflow units
